

USING THE EXOS

Before using, you must purchase and install the correct electrical plug for your country. The EXOS ships to many countries with different voltages and plugs. It works with voltages from 110-230.

Please read the owners manual and watch the video at <http://www.autofishscalers.com/EXOS-221-Electric-Pin-Bone-Remover> before using. Do not rush it. It takes some practice to get the hang of it. It may seem slow at first.

DO NOT IMMERSE THE EXOS IN WATER.

Rinse only. It will rust and you will void the warranty.

When cleaning the EXOS, remove the bone guide(s). Then, pull the drum off with your fingers. If you cannot pull it off, it may be necessary to use a flat head screwdriver to loosen the drum.

When replacing the drum, the bottom of the drum has an oval shaped hole that must fit over the same shape on the base. Push on and then rotate until it fits. Then push down until it is secure. **YOU SHOULD NOT BE ABLE TO PULL IT OFF EASILY.**
